Summer Intensive Program 2019

The MCICE Summer CI Intensive Program is geared for children ages 3 to 6 who are cochlear implant recipients or are on the path to a cochlear implant.

The program uses a literacy-based, oral language focused curriculum to provide intensive auditory therapy interwoven through fun activities in a classroom setting. This two-week experience provides the opportunity for continued development of speech, language, and auditory skills during summer break from school as well as new social opportunities with their peers.

Details
